

I am a 2nd generation broadcaster...my mom worked in RADIO for 35 years...my love for this industry goes DEEP...with market place accepting xm and other satellite providers...it would appear the market place should decide...if the Broadcast Clusters in a given market are not providing the variety the public wants...and the technology provides a way for the public to have what they want...a citizen should be able buy the satellite service he wants. what we have here are examples "Who Stole My Cheese" The playing field is changes...each time changes were implimented...there were winners and losers In short I DO NOT Want the NAB telling me what I can and can't listen to on XM....myself and 10's of thousands enjoy this tecnology PLEASE REJECT THE NAB PETITION 04-160
